

WENQI ZENG (KATHLYN)

wenzqizeng@hsph.harvard.edu | +1 (217) 402-1902 | Boston, MA, 02215 | <https://www.linkedin.com/in/wenqi-zeng947/>

EDUCATION

Harvard University <i>M.S. in Health Data Science</i>	05/2026 (Expected) GPA: 4.0/4.0
University of Illinois at Urbana-Champaign (UIUC) <i>B.S. in Statistics and Economics</i>	05/2024 (Graduated with Highest Honor) GPA: 4.0/4.0

SKILLS

- **Languages & Tools:** Python (pandas, scikit-learn, PyTorch, TensorFlow, FastAPI), SQL, Docker, Git, AWS (S3, EC2, Lambda), Google Cloud, Spark, Tableau, Power BI, Hadoop, MongoDB
- **AI & ML:** Deep Learning (Transformers, CNN, RNN), Generative AI (LLM APIs, RAG, Embeddings), Tree-based Models(XGBoos, Random Forest), Model Deployment & Optimization (Docker, Triton, vLLM)

PROFESSIONAL EXPERIENCE

Mayo Clinic , Rochester, US	<i>Machine Learning & AI Intern</i>	09/2025 – 12/2025
• Building a Hidden Markov Model (HMM) in Python to analyze diagnostic test sequences, establishing a baseline for predicting neuropathology diagnoses from expert historical data. • Developed an AI-driven diagnostic support tool leveraging POMDP framework using information theory to calculate entropy and information gain to recommend optimal diagnostic tests, improving test selection efficiency. • Implemented LLM-based feature extraction to automatically derive semantic test attributes and performed large-scale EDA, feature engineering and integrate probabilistic reasoning into the system's core decision logic		
TikTok , San Jose, US.	<i>Computational Pathology & AI Intern</i>	05/2025 – 08/2025
• Conducted seasonal and user analysis of core Europe LIVE KPIs; quantified magnitude of seasonal effects and profiled key contributing user groups, enabling the recommendation team to adapt strategies for future metric shifts. • Designed and executed A/B and AA causal inference analyses for the LIVE AB experiment evaluating a strategy balancing user lifetime and the Live ecosystem; provided decisive data support to leadership to revert the strategy. • Performed attribution analysis on abnormality of the LIVE content screening model, validated the structure-shift hypothesis, which pinpointed the model optimization directions and improved model filtering efficiency by 20%. • Built the Governance All-in-One Dashboard, automating data pulls (SQL) and updates to enable 100% real-time tracking of core metrics with multi-dimensional aggregation, reducing ad-hoc data requests by 70%		
Tencent , Shenzhen, China	<i>Fintech Machine Learning Intern</i>	06/2024 – 08/2024
• Developed a scalable time-series analysis pipeline in Python to visualize seasonal patterns and cross-correlations in payment transactions, implementing statistical validation (Shapiro–Wilk, KS tests) and VIF-based feature reduction to improve signal quality and model robustness, identifying 10 key features strongly correlated with payment amount. • Engineered and optimized forecasting models (LightGBM, Prophet, NeuralProphet) with automated lag-feature generation, rolling-window evaluation, and holiday feature analysis; reduced MAPE from 14% → 7% % and was applied to China's largest instant funding service • Implemented SOTA models (AutoARIMAProphet, SOFTS) with runtime optimization; reduced processing latency by 67% (30 s → 10 s) and deployed for real-time demand forecasting in backend systems.		
Wisee Technology , Seattle, US.	<i>Marketing Data Scientist Intern</i>	05/2022 – 01/2023
• Built an NLP pipeline to process and tokenize 3700+ Instagram posts using Python, applying Named Entity Recognition and sentiment classification models to extract brand mentions, product attributes, and engagement signals for trend detection and influencer profiling, leading to a 208% increase in GMV for clients • Collected and cleaned influencer pricing data from over 1,000 entries using SQL and Python, visualizing comparisons across platforms and regions via Tableau. Identified pricing trends and market gaps, supporting strategic pricing adjustments and influencing over \$100,000 in campaign budget allocations		

PROJECT EXPERIENCE

InfluencerLens – Multimodal RAG Platform, Boston, MA.	09/2025 – 12/2025
• Built a generative AI influencer search system for TikTok, integrating LLMs and Neo4j graph database to model creator–content–tag–audience relationships and enable RAG-based semantic matching and explanation generation. • Developed a scalable Python/FastAPI retrieval pipeline combining using BM25+vector hybrid search with RRF fusion and cross-encoder reranking, supporting LLM-driven query rewriting, structured filtering, and containerized deployment with Docker and Kubernetes (GKE).
